Helping the environment – should we do our bit?:
'stimulus statements'

‘What's the point in composting kitchen waste when it is much easier to put it in a plastic bag and bin it.’

‘I think we should all do our bit for the environment and compost to reduce the amount of waste that is put into landfill sites.’

‘I have heard that the lack of oxygen in landfill leads to the production of greenhouse gases, particularly methane. This must be contributing to global warming.’

‘Micro-organisms generate greenhouse gases. We should find a way to destroy all the microbes in the world.’

‘Using biofuels produced from food stuffs has to be wrong. Scientists must be able to find other ways of producing this type of green fuel.’

‘Are scientists right to genetically modify organisms to get them to produce biofuels from non-food stuffs. Are they putting us at risk?’
